ACADEMIC DETAILS

• Major Projects: -

1. Design and fabrication of solar powered heating appliances.

Project Description: In this project the parabolic dish is used made from aluminum oxide having reflectivity 92 %. These parabolic dishes reflect the sun rays on the thermic fluid in the container. The thermic fluid gains heat from reflected rays. This heated fluid is being circulated through an insulated pipe to the heat exchanger for cooking purpose.

Technology Used: Solar Energy

2. Project Title: - Fully Automated Lemonade Machine

Aim of the project is to Design and manufacture the fully automated machine to serve directly drinkable lemonade. All earlier developed machines are only juice extractors. Machine is designed in such way that, it is capable of in taking lemons cutting and squeezing it. Storing the juice and mixing all the ingredients in proper proportion in order the serve the delicious lemonade to the consumer. And the mechanical and electronic components are optimized in such way that compete operation is performed in single click of button. Machine is tested for all possible circumstances.

PERSONAL SKILLS
